

The Superintendent of Schools will be responsible for developing and updating regularly a comprehensive long-range facilities development plan that will serve as a guide for capital improvements and enable the District to provide appropriate facilities to meet the educational needs of students.

Pursuant to the plan, the Superintendent shall:

1. continually monitor and evaluate changes in the curriculum, enrollment trends and patterns within the school district, the availability of construction funds, and other relevant factors, and periodically recommend appropriate modifications to the plan;
2. annually evaluate the status of all school buildings and grounds in order to ensure that an atmosphere conducive to quality education is maintained;
3. conduct an annual assessment of equipment, facilities, and maintenance practices to ensure that district schools are operated in a manner that meets the present and future needs of the educational mission of the district; and
4. insure that state requirements for five-year assets preservation plans are met satisfactorily.

A committee of citizens and staff members should be appointed periodically (every three to five years) to review District needs for maintenance, renovation, and new construction and to consider and propose ideas and suggestions for the Board of Education related to the construction, remodeling, and/or repair of District facilities.
